LEONID YESAULOV

ABOUT ME

AI & Infrastructure Engineer with a strong mathematical foundation and a track record of delivering secure, scalable solutions. Adept at managing the full deployment lifecycle, utilizing tools like Docker, Traefik, and CI/CD pipelines across cloud and self-hosted environments. Skilled in building performant backend services with Python, Golang, and gRPC, alongside leading complex academic projects such as C/C++ memory unit simulations. Passionate about applying the mathematical principles of machine learning to solve real-world infrastructure challenges.

EDUCATION

2024-2027 (Expected)

Informatics BSc. with minor in Mathematics at
Technical University of Munich

PROJECTS

Omniserv (Homelab, ongoing):

Automated deployment and managed lifecycles for backend services using Docker and CI/CD pipelines.
Configured local network routing, DNS resolution (Pi-hole), and security protocols.
Implemented reliable accounting and smart-home systems, digitalizing day-to-day processes.

uWeMe (Startup, 06.2024 - 10.2024):

Transformed an initial prototype into a fully functional MVP by removing placeholders and systematically resolving core bugs, engineering both front (Flutter) and back-ends (Go).
Successfully integrated the application into the Apple Store ecosystem via TestFlight.

COMPETENCIES

Backend: Python (FastAPI), Java, C/C++, GoLang, gRPC
Infra & DevOps: AWS, Google Cloud, Docker, CI/CD, Traefik, Caddy, Linux (Arch, Debian)
Frontend: Flutter/Dart, HTML, CSS, JS
Misc: Git, Make
